

EARS/NAIL TRIM \$15.00 YES _____ NO _____ Clean ears and trim nails.

EXTRACTION RETAINED BABY TEETH (\$10-18 Depending on amount of teeth extracted) YES ___ NO ___

PAIN MEDICATION (This is \$5-\$20 depending on the weight of the animal)

Pain medication is required for this procedure. This includes a pill form of pain medication for dogs and a liquid form of medication for cats.

E.C.G \$46.00 YES _____ NO _____ The E.C.G. reading will give the doctor(s) information on the condition of your pet's heart. E.C.G. can detect problems such as enlarged ventricles, valve problem, electrical conduction problems, which may cause your pet to be more sensitive to anesthesia. Cardiologists view the E.C.G. results prior to surgery, then fax the results to us. They let us know if your pet is healthy enough to undergo surgery or if we need to give any special injections prior to, or during surgery. **THIS IS MANDATORY FOR PETS 7 YEARS OF AGE AND OLDER.**

MICROCHIP \$32.00 YES _____ NO _____ Microchip identification is a positive way to identify ownership, if your pet is lost or stolen (not to be confused with GPS) and ends up in a shelter, veterinary clinic, or animal control facility.

FLEA/TICK PREVENTION \$9.25 As part of our flea-free policy, any animal coming in for surgery, baths, drop offs, boarding, etc. will automatically be treated with a capstar pill. This is to ensure your pet does not go home with fleas. If your pet is found to have ticks a tick treatment will be applied at your expense.

VACCINATIONS All animals staying for surgery must be current on vaccinations. Dogs are required to have rabies, dhlp, and bordetella. Cats are required to have rabies and fvrcp.

EXAM \$15.00 All animals must have a current examination within the last six months by our veterinarian. Also if your pet is here for a surgery or dental and this procedure has not been recommended by one of our doctors you pet will be examined by a veterinarian prior to the procedure being performed.

COMPANION LASER THERAPY TREATMENT \$16.50 As part of Benning Animal Hospital's goal of offering you and your pet the best in state of the art patient care, we now offer post-operative laser treatment at the incision site. **This treatment is only an option with spay and neuter surgery; all other surgeries will require the treatment.**

This treatment is administered to:

1. **REDUCE THE PAIN** at the incision site (which is the most painful part of the procedure)
2. **REDUCE POST OPERATIVE SWELLING** which normally occurs after surgery.
3. **SHORTEN THE HEALING TIME** improving your pet's quality of life, and your time providing extra care for your pet. We still give pain medication prior to the procedure and provide anti-inflammatory medication, but you may find, after the laser therapy, that your pet does not require the entire regimen. The laser is a **DRUG FREE** pain relief option.

____ YES-I want my pet to receive Companion Therapy Laser post-operative treatment today.

____ NO-I decline this treatment and just want the anti-inflammatory and pain drugs for my pet.
